

AMENDMENTS TO SPECIFICATION

Page 16, the first paragraph is amended to read:

A sectional drawing of the aspirator **2** as seen from the direction of the lead-in tube **10** is shown in FIG. **9**. When the actuator mechanism **33** rotates counter clockwise, the centrifugal fan blades **32a** also rotate in the counter clockwise direction, draw the air of the lead-in tube **10** through aspirator inlet **30a**, and discharge this air in the direction of the outer side of the centrifugal fan blades **32a** to the air duct **36**. Air discharged by the air duct **36** flows along the periphery inner wall surface of the body part **30**, and subsequently discharged from the discharge part **31** to the outside of the body part **30**.
